NMWG Communications Team (Front): Sharleen Taylor, Felicia Holder, Dalia Watson, with the women of SWOTS.

Newly installed air compressors, in the Instrument Skid area on Amherstia.

The removal of the electrical building on the Terminal's jetty.

THE FANTASTIC SIX…!

To the left is our scaffolding team who work on our existing maintenance contract with Methanex Trinidad Ltd. This tight knit team of six was acknowledged by Methanex Senior Management, as one of the exceptionally hard working teams in their operations. They were praised for their high output and efficiency each week which, for a small team, is consistently above schedule. The prominence of their strong work ethic is surpassed only by their outstanding safety record of zero recordable incidents! Acknowledging this accomplishment, Ray Stoute, Methanex Contract Manager, proudly nominated each of the team's members for a silver reward under NMWG's Reward & Recognition Programme. You have done yourselves proud guys! We are delighted to recognise your hard work and success across the company!

MEET THE PROJECT CONTROLS TEAM!

"One NMWG!" is being underscored by the integrated Project Controls Department, as they rightfully demonstrated at their recently concluded team builder. The duties of the Project Controls team involves planning, costing, managing and mitigating risk on all our client's projects from start to end. It is led by Julian Mills (Project Controls Manager), Gustavo Paolini (Senior Planner/Scheduler Engineer) and Lorraine David (Senior Cost and Planning Analyst). The members hope that by integrating across locations and contracts that they can continue to function as one effective, cohesive team. Their team builder was one step of many more, towards maintaining this directive!

SOCIAL RESPONSIBILITY, VALUES AWARDS WINNER!!

The NMWG Communications team was ecstatic to be named the June 2012 winner, of Wood Group's Social Responsibility Living our Values Award! The award recognised the team's efforts to positively impact the lives of women in the Mayaro/Guayaguayare community, under the Successful Women on Towards Self Reliance (SWOTS) community programme. The 'Living our Values' awards aim to globally recognise Wood Group people, who actively demonstrate one of their seven core values. As the winners, the Communications team was excited for the opportunity to highlight the success of SWOTS on an international scale and thankful for the enormous support and well wishes they have thus far received. Many congratulations ladies; the work you continue to do with SWOTS is truly remarkable!!!

SUCCESS IN THE FACE OF A CHALLENGE

One of the successes of a project, lies in the team's ability to triumph over challenges. This is exemplified in the air compressor change out project in the Instrument Skid area on bpTT's Amherstia platform. Hampered by a series of operational and weather delays and technical hurdles, the upgrade project on the outdated compressor grew in scope as it progressed. The pressure on the team intensified when, during the project period, the temporary rental of air compressors became necessary to maintain the supply of compressed air, critical to the client's platform operations. Despite these challenges, the project execution was smooth and efficient. What started as one project, evolved into a modernising face lift of the entire Instrument Skid area (see photo). Benny Yip, the Project Single Point Accountable (SPA), remarked on the working harmony across the NMWG and bpTT teams, and our subcontractors, which he considered a nice blend of great personalities. Great job guys!

A SAFE LIFT WITHOUT A HITCH!

To facilitate the construction of a new port at Terminal, bpTT began a clean-up of the area outlined to be used. They entrusted the NMWG team at Terminal with the job of overseeing the safe and complete removal of several items on the facility ranging from 500-9000 lbs. The removal of the items which involved coordinating with a crane & lifting company, began on June 29th and was completed that same day. The process was carried out safely and without any incidents, making it a commendable success for all involved. Thanks are extended to the Maintenance Department: Mouren Shah, Dipnarine Maywalal, Arvinash Ramoutar, Justin Jagassar and Dion DeCoteau; the Terminal Utility Crew (TUC): Ricky Ramdan, Lisa Radhay, Reginald Blondell, Ricky Gunness and Lewis Rigues and contractors: Paramount Transport and Kreekon, for their part in this success!
